

# Volt Minder

**Perfect for use on all motor vehicles that use one or more 12-volt batteries, such as Big trucks, RV's, boats, and motorcycles.**

## Features

- Alerts when your vehicle's battery is about to die with a loud audible warning
- Immediate voltage read-out
- Illuminated LCD for night use

### **VoltMinder performs two very critical functions:**

- Alert the operator that the battery is approaching a voltage that will not be sufficient for the engine to start
- Alert the operator that the battery is not charging while the engine is in operation

The actual voltage of the battery is displayed via a digital readout on VoltMinder. A warning sound will be activated when the battery voltage is reduced to a level that is designated by the operator. This warning voltage level can be set from 10.5 to 13.5 volts DC. VoltMinder is 4" X 2" x .75" (a little smaller than a pack of cigarettes) and comes with a 6-ft cord that plugs into your vehicle's power outlet (cigarette lighter).
